

# HOW

DO WE DO DATA  
ANALYTICS?

ADITYA FIRMAN IHSAN

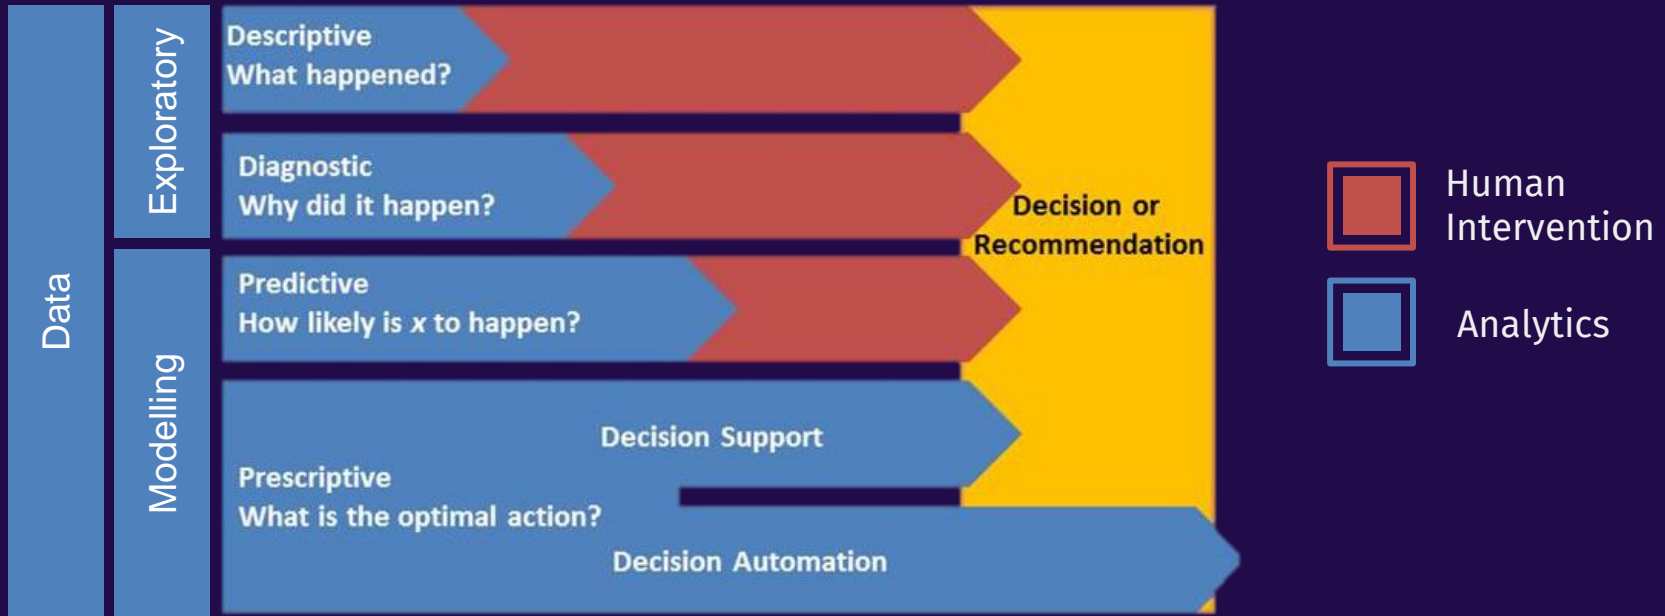

# GENERAL STEP OF DA

It is a cyclic process

# 4 TYPES OF DATA ANALYSIS

# DATA ANALYTICS TASKS

## Exploratory

- Sorting
- Grouping
- Visualization
- Basic Statistics
- Feature Engineering

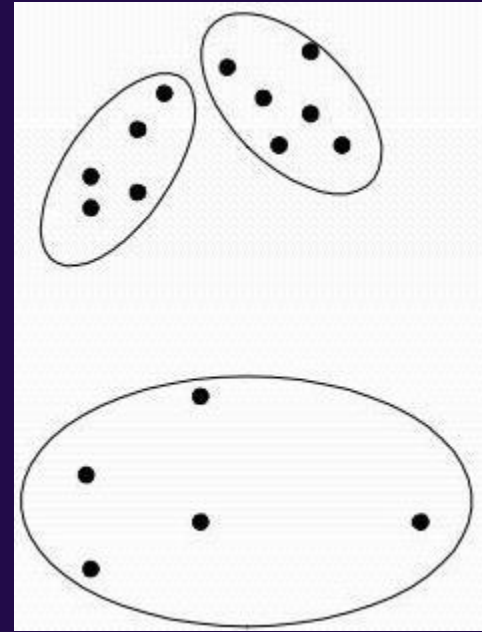

## Modelling

- Regression
- Classification
- Clustering
- Forecasting
- Anomaly Detection

# REGRESSION & CLASSIFICATION

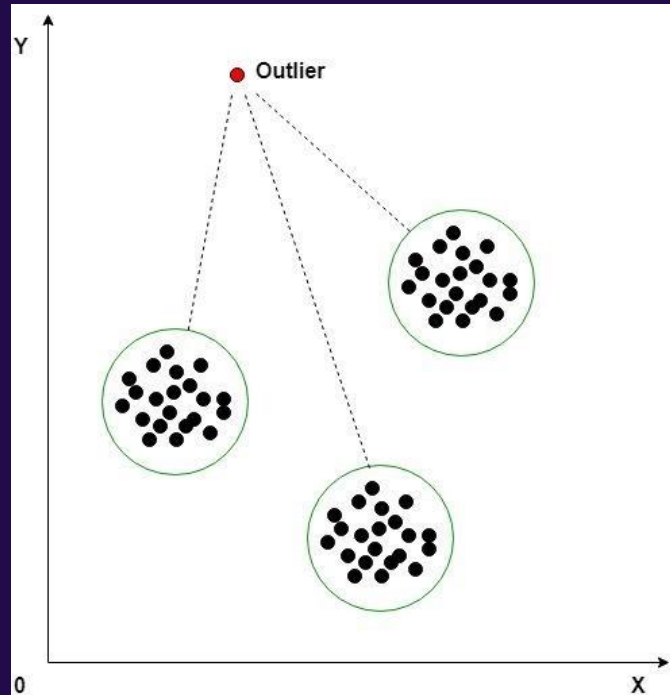

# CLUSTERING

# FORECASTING

# ANOMALY DETECTION

The logo for the Julia programming language, featuring the word "julia" in a lowercase, sans-serif font with four colored dots (blue, green, red, purple) above the letters.

Google Sheets

The Orange logo, featuring the word "orange" in a lowercase, sans-serif font with a stylized orange fruit icon to the right.

MATLAB®

Open for Innovation®

KNIME

**CODE-BASED**

Keyboard-focused:  
Type this and type that

Flexible and light

**GUI-BASED**

Mouse-focused:  
Click here and click there

Intuitive and easy

Open for Innovation

KNIME logo

## CODE-BASED

Keyboard-focused:  
Type this and type that

Flexible and light

## GUI-BASED

Mouse-focused:  
Click here and click there

Intuitive and easy

# EXCEL

One of the most used data manager in most traditional business process

# WHY EXCEL?

**Graphical  
UI**

Visually  
Intuitive

**User-  
Friendly**

Just learn  
few clicks

**Readily  
available**

All Desktop  
should have it

**Simplicity**

Less effort to  
understand

# WHY NOT EXCEL?

## Data Volume

Only powerful in relatively small dataset

## Security Risk

Vulnerable in digital attack

## Syntax Problem

Hard to see and understand any bug in formulas

**PYTHON**

MOST POPULAR  
PROGRAMMING LANGUAGE  
SINCE 2016

# WHY PYTHON?

01

## **BUILD FOR READABILITY**

Easy to be read is Python's purpose of life!

02

## **Wide Community**

A lot of users that can help each other!

03

## **Rich Libraries**

Anything you need is there

04

## **Multi-function**

Cover up almost everything (From game, app, hack, analysis, crawling, robotic, etc)

05

## **Free!**

Just need coffee and a few snacks

06

## **Glue Language**

Connect to many systems

# Zen of Python

In the face of ambiguity, refuse the temptation to guess.  
There should be one-- and preferably only one --obvious way to do it.  
Although that way may not be obvious at first unless you're Dutch.  
Now is better than never.  
Although never is often better than \*right\* now.  
If the implementation is hard to explain, it's a bad idea.  
If the implementation is easy to explain, it may be a good idea.  
Namespaces are one honking great idea -- let's do more of those!

Beautiful is better than ugly.  
Explicit is better than implicit.  
Simple is better than complex.  
Complex is better than complicated.  
Flat is better than nested.  
Sparse is better than dense.  
Readability counts.  
Special cases aren't special enough to break the rules.  
Although practicality beats purity.  
Errors should never pass silently.  
Unless explicitly silenced.

# WHY PYTHON FOR DA?

01

## SCALABILITY

More data? More complex?  
Easy!

02

## Automation

Updating data, renaming,  
formatting, checking, etc, in  
automatically

03

## Data-Agnostic

Give Python any data file, and  
it will work.

04

## Reproducibility

Anyone can do the same things  
with the same code

05

## Supporting Tools

Colaborate with Git and work  
with Notebook

06

## Advanced Capabilities

From statistical inference to  
cool visualization

# WHY **NOT** PYTHON?

... Well, nothing!

Eh, except

01

**Hard to start**  
Steep learning curve

# Libraries in Python

## Analytics

- Statsmodels
- Pandas
- Dask
- NumPy

## Visualization

- Matplotlib
- Seaborn
- Plotly

## Machine Learning

- Tensorflow
- PyTorch
- Sckit-Learn

**BUT, I CAN'T  
PROGRAMMING**

# STEEP LEARNING CURVE

**Python is difficult to learn initially**

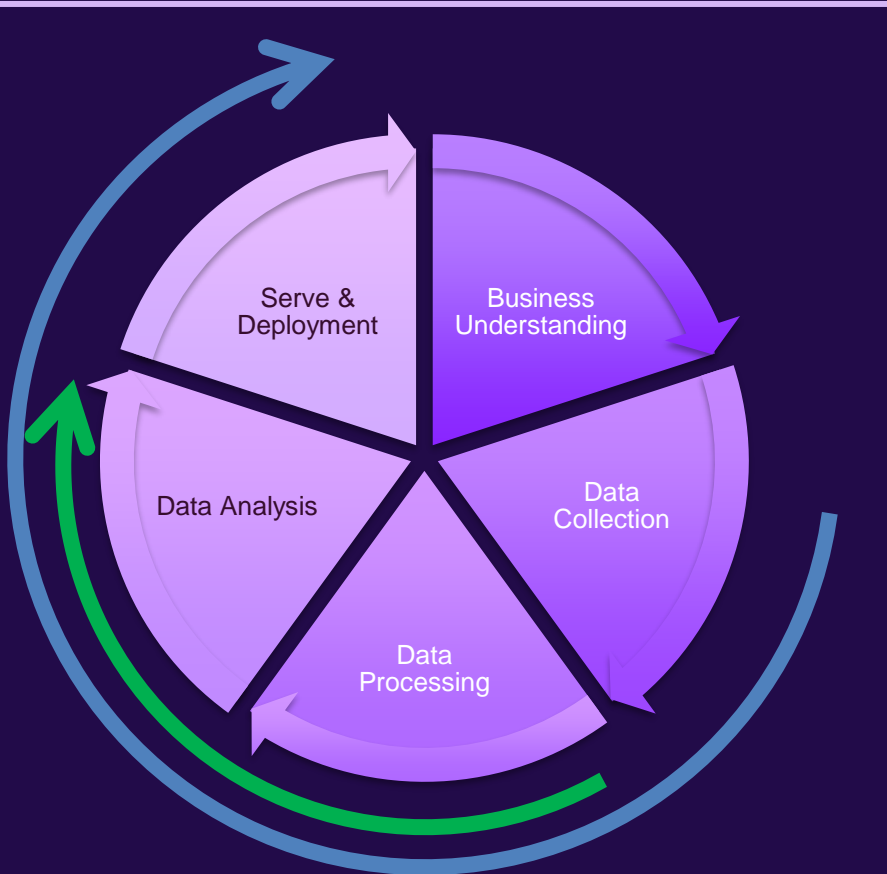

**especially for those who never do programming**

**And yeah, we need to set up environment, install libraries, etc**

**IN THIS ERA, PROGRAMMING  
WILL EMPOWERED MOST JOBS**

# GENERAL STEP OF DA

# DATA ANALYTICS TASKS

## Exploratory

Sorting  

Grouping  

Visualization  

Basic Statistics  

Feature Engineering  

## Modelling

Regression  

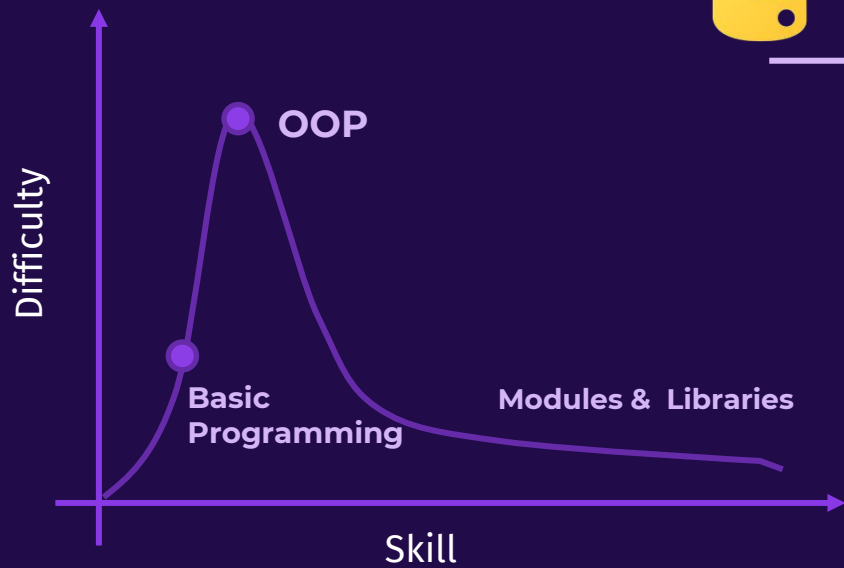

Classification  

Clustering  

Forecasting  

Optimization  

# OPPORTUNITY COST

	Excel	Python
Simplicity	+	-
Capability	-	+

Keep using excel, no learning effort,  
but only able to do the same things

Move to python, learn all the tools,  
advance the analysis

**LET'S SEE  
HOW IT'S DONE!**

# THANKS!
